

1,000+ IDENTICAL RACKS, ON TIME FOR LAUNCH.

An OEM ramping a new line needed a large fleet of identical returnable racks on a hard deadline — SPF's **robotic welding** delivered the volume and the weld consistency.

ON-TIME TO THE
LAUNCH DATE

ROBOTIC

WELDED FOR RACK-TO-
RACK CONSISTENCY

THE CHALLENGE

An automotive OEM ramping a new **[line / model]** needed more than 1,000 identical returnable racks by a fixed launch date. Volume was high, the timeline tight, and weld consistency across every rack was critical.

WHAT SPF DID

SPF ran the weldments through FANUC robotic welding for repeatable, spec-consistent joints at volume, scaling output to hold the launch window. Cutting, welding, and powder coat all stayed in-house on one PO.

THE RESULT

Over **1,000 racks delivered 100% on time** for launch — every weldment robotic-welded for rack-to-rack consistency — and the account became a repeat program for follow-on parts.

A STAGED FLEET OF IDENTICAL RACKS · POWDER-COATED

“[Every rack was identical and they all showed up on schedule.]”
