

AN AGING FLEET, BACK TO SPEC FOR A FRACTION OF NEW.

Rather than replace a worn fleet of returnable racks, a manufacturer had SPF **inspect, repair, and re-finish** them — back in service in days, at a fraction of new-build cost.

~40%

1-2 WKS

TURNAROUND
PER BATCH

THE CHALLENGE

After **[several years]** in a returnable loop, a manufacturer's fleet of 75-200 steel racks was bent, cracked, and worn — risking part damage and operator safety. Replacing the fleet outright was costly and slow.

WHAT SPF DID

SPF inspected the fleet, re-welded and repaired damaged members, replaced what was beyond saving, and re-finished every rack back to original spec. Because SPF builds racks like these, the failure points were already familiar.

THE RESULT

75-200 racks returned to service at about **40% of new-build cost** in 1-2 weeks per batch — extending fleet life by **[several years]** and restoring safe, damage-free handling.

“[They turned our beat-up racks around faster and cheaper than buying new.]”
